

Contrary and Congruent Views of Leadership and Management in the Australian Social Economy

A research project by

"The 21st Century will be the century of the social sector organisation. The more economy, money and information become global, the more community will matter. And only the social sector nonprofit organisation performs in the community, exploits its opportunities, mobilizes its local resources, [and] solves its problems. *The leadership, competence, and management of the social sector nonprofit organization will thus largely determine the values, vision, the cohesion and performance of 21st Century Society.*"

Peter F Drucker, Drucker Foundation 1999

Via this report we introduce the concept of "open source research". This idea parallels the very successful open source movement in the software industry exemplified by Linux, Firefox and thousands of other valuable projects. A core element of the open source movement¹ is a license that forces derivative works to be as free as the material on which it is based. In this way, intellectual property can enjoy total freedom, maximising its opportunity to be used and improved. Academia has a long tradition in this vein. The difference here is the legal framework that requires derivative work to be shared publicly and for free.

Note

The data and evidence were collected in this study during the period July – October 2007. Since then conditions may have changed. Hence, interpretations provided in this report may also have changed in the interim and in the period of dissemination and discussion about the outcomes of the study. The reader is referred to the archives for further verification of both data and interpretations. These preliminary findings are shared in the spirit of action learning and collaboration, an organising theme in the conduct of the research. Your constructive criticism either with the team via email or via the SEEEN discussion forums (www.seeen.org.au) is welcome.

¹ For an overview and introduction see the wikipedia entry at http://en.wikipedia.org/wiki/Open_source.
